

The TECHNO WIND FOIL was originally developed as a FOIL for freeride conditions and recreational use. Designed for use by those coming from the sport of windsurfing, looking for a hybrid Windsurf & Wind Foil product, it was designed to give a positive feedback on the back foot to replicate a "windsurfing" feel, allowing for a comfortable transition between the different sports.

As the sport of wind foiling has evolved, and the TECHNO WIND FOIL is being used with larger sails, by larger sailors and by those looking particularly to maximize the performance in upwind and downwind sailing conditions, the back foot feedback for some users is not preferable. As a result we now have a 0.5 mm Spacer available that can be inserted into the front of the rear stabilizer (under the screw), to increase the power of the TECHNO WIND FOIL and reduce the back foot pressure, resulting in a more balanced feel when flying on the Foil.

In short:

- TECHNO WIND FOIL without spacers, out of the box: Ideal for learning to wind foil in freeride sailing conditions.
- TECHNO WIND FOIL with 1-2 spacers: to be added for those looking to evolve the performance further, or for heavier users.

TECHNO WIND FOIL SPACER 0,5mm Ref. 106644

## Stabilizer angle tuning
